INTRODUCTION

FutureThink was contracted to develop enrollment projections by school for the Columbus City School District. These projections are based on the 10-year district-wide projections developed through the Ohio School Facilities Commission.

The ten-year enrollment projections were developed for the Columbus City School District by analyzing the following data:

- ▶ Live birth data
- ▶ Historical enrollment
- ▶ Community school enrollment
- ▶ Open enrollment
- ▶ Community demographics
- ▶ Housing information

To develop the by school projections, the following data was analyzed as well:

- ▶ Historical enrollment by school
- ▶ High school and middle school feeder patterns
- ▶ Population projections by census block group

The projections presented in this report are meant to serve as a planning tool for the future and represent the most likely direction of the District.

Columbus City School District

ENROLLMENT PROJECTIONS

The following tables illustrate historical and projected enrollments by grade and by grade group. Over the past ten years, enrollment has declined by 8,944 students or approximately 15 percent. Over the next ten years, enrollment is projected to increase by 347 students or approximately 1 percent.

Please note the career technical students are included in the 11th and 12th grade projections for the high schools. They are not broken out separately. Ungraded students are not included in the by school projections.

Columbus City School District

Survival Ratios for Each School

The survival ratios demonstrate the changes in enrollment as students move through the system. Percentages greater than 100 indicate that there are more students than there were in the previous grade the previous year. In other words, there was growth and new students entered the system. Percentages less than 100 indicate that there was decline with students leaving the system.

- ▶ Birth to Kindergarten: This ratio indicates the number of children born in the area who attend kindergarten in the District 5 years later.
- ▶ Grades 8-9: The higher than usual percentage often is a result of school district promotion policies. Often in school districts, students are promoted from 8th to 9th grade and after one year in 9th grade do not have sufficient credits to be classified as 10th graders and are counted again as 9th graders the following year. There may also be students who attended private or charter schools or are home-schooled through grade 8 and then attend public schools for high school education.

The survival ratios can also show when certain changes were made in the District and their impact on enrollment: policy changes, program changes, swing space, new/renovated school opening, etc.

The survival ratios follow. They are listed by the high school feeder pattern.
